PAYSLIP RETRIEVAL PORTAL

Full Technical Documentation & User Manual (PHP / MySQL Portal)

Author: George Kostopoulos
Version: v1.0 | 2025

1. SYSTEM PURPOSE & WORKFLOW ARCHITECTURE

The **Payslip Repo / Information Retrieval System** application is a specialized web platform for the secure distribution of monthly payroll slips. The system bridges communication between the **Accountant / Payroll Department** and the company employees.

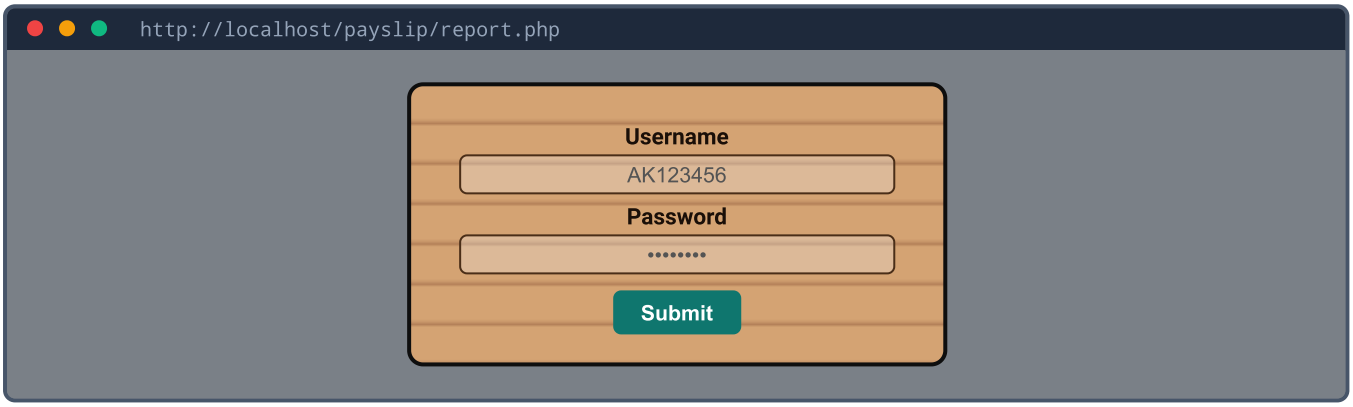

1. Accountant Flow (Upload Phase)
- Generation of monthly PDF payslip.
- Placement of file on server.
- Update MySQL database with file path.

2. Authentication (Login)
- User login via report.php.
- Input Username (ID Card) and Password (Mobile).
- Verification of user credentials.

3. Search & Download
- View history on eisagogi.php.
- Filtering capabilities.
- Secure streaming of PDF via PHP readfile function.

2. USER LOGIN INTERFACE (REPORT.PHP)

Visual representation of the login form featuring the custom styled background (style.css):

3. PAYROLL CORE FUNCTIONAL PILLARS

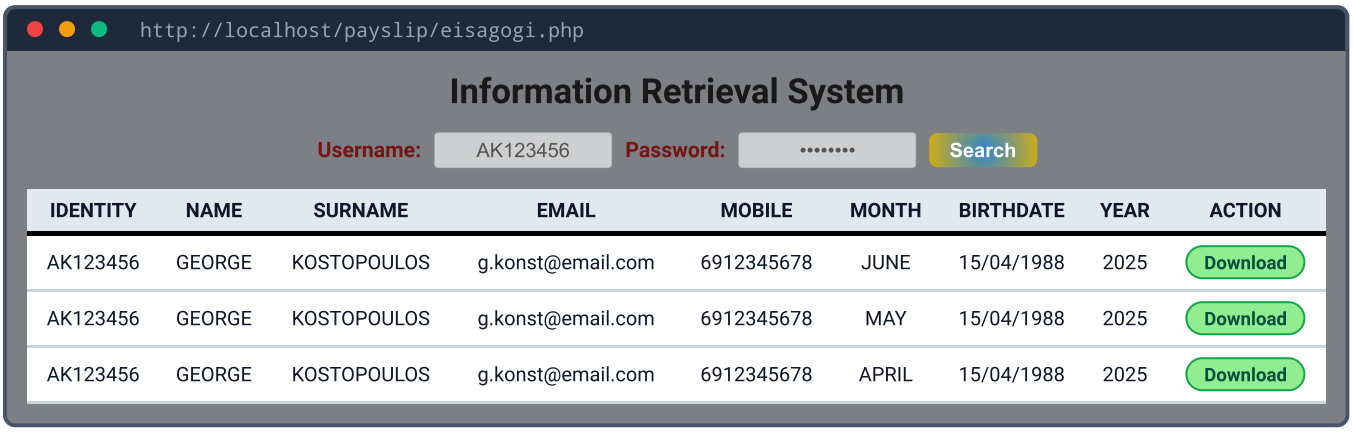

Calculation & Tracking Parameters:

The system tracks and processes all core payroll modules represented on individual employee slips:

CALCULATION | TIME | INCOME | PERFORMANCE | NOTIFICATION | AGREEMENT

4. INFORMATION RETRIEVAL PORTAL & RESULTS TABLE (EISAGOGI.PHP)

Upon successful authentication, the employee is directed to the primary **Information Retrieval System** portal:

IDENTITY	NAME	SURNAME	EMAIL	MOBILE	MONTH	BIRTHDATE	YEAR	ACTION
AK123456	GEORGE	KOSTOPOULOS	g.konst@email.com	6912345678	JUNE	15/04/1988	2025	Download
AK123456	GEORGE	KOSTOPOULOS	g.konst@email.com	6912345678	MAY	15/04/1988	2025	Download
AK123456	GEORGE	KOSTOPOULOS	g.konst@email.com	6912345678	APRIL	15/04/1988	2025	Download

5. DATABASE SCHEMA & STRUCTURE

The application interacts with the MySQL database (your_data_base) and the employee table (your_table):

Column Name	Data Type	Description & Purpose
`identity`	VARCHAR / TEXT	Employee National ID / Username (Used for user authentication).
`name` & `surname`	VARCHAR	Employee First Name and Last Name.
`email`	VARCHAR	Contact Email Address.
`mobile`	VARCHAR	Mobile Phone Number (Used as Password).
`month` & `year`	VARCHAR / INT	Month and Year of the issued payslip (e.g., JUNE 2025).
`date`	DATE / VARCHAR	Birthdate or entry record date.
`path`	TEXT	Relative or absolute server file path pointing to the stored PDF document.

6. DETAILED TECHNICAL OVERVIEW & SECURE FILE DELIVERY

Secure PDF File Handling Mechanism

When an employee clicks the Download button, the request is processed server-side by PHP. The system verifies file existence on the disk and dispatches appropriate HTTP response headers, initiating a direct file stream to the client browser without exposing the true file path on the server file system.

7. INSTALLATION & DEPLOYMENT GUIDE

1. **Web Server Setup:** Install an Apache/PHP/MySQL stack (e.g., XAMPP, WAMP, or Linux LAMP stack).
2. **File Placement:** Copy report.php, eisagogi.php, style.css, and style1.css into your web directory (e.g., htdocs/payslip/).
3. **Database Configuration:** Create database your_data_base and import table your_table with the specified column schema.
4. **File Path Configuration:** In eisagogi.php, configure the $filepath variable to point to your PDF storage folder:
   `$filepath = C:/xampp/htdocs/payslip/pdf_files/ . $file;`
5. **File Permissions:** Ensure the web server process has read permissions for the target PDF folder.

8. SECURITY RECOMMENDATIONS & ENHANCEMENTS

Prepared Statements
Replace raw SQL queries with mysqli_prepare to completely prevent SQL Injection vulnerabilities.

PHP Sessions (session_start)
Implement PHP sessions to preserve user authentication state across page requests.

Password Hashing
Utilize password_hash and password_verify for secure credential storage in MySQL.
